# STONE QUARTZ

POLYURETHANE | POLIURETANO | POLYURETHAN

SHOWER TRAYS PIATTO DOCCIA DUSCHWANNEN

Our resin and crushed mineral Stone Quartz shower trays are designed to provide maximum safety, durability, style and quality in your shower space.

Shower tray made of polyester resin and quartz grains.

Top quality acrylic polyurethane outer coating (UNE 12720).

Antislip C3, maximum grip >45 Rd. (UNE ENV12633:2003 Certificate).

Antibacterial treatment: (JISZ 2801:2006) that prevents any microorganism from settling on its surface.

Class 1 shower tray in terms of durability and ease of cleaning, certified by the AIDIMME technology institute.

Resistant to hydrolysis: no deformities after 7 days immersed in water.

Resistant to household cleaning agents: surface hardness 5 H.

Core of shower tray tinted in a similar colour as the surface.

Made in Spain.

Thickness 30 mm or more for greater resistance to twisting.

Polished stainless steel stamping grid included.

I nostri piatti di carica minerale Stone Quartz sono progettati per offrire la massima sicurezza e durabilità. Stile e qualità nel tuo spazio doccia.

Piatto fabbricato con resina in poliestere e cariche minerali di quarzo.

Rivestimento esterno di poliuretano acrilico di massima qualità.

Antiscivolo C-3 massimo livello di aderenza per > di 45 Rd.

Trattamento Antibatterico: (JISZ 2801:2006) che impedisce che qualsiasi microorganismo si installi sulla sua superficie.

Classe 1 in durabilità e facilità di pulizia certificato dall'istituto tecnologico AIDIMME.

Resistente all'idrolisi: nessuna alterazione dopo 7 giorni sommerso in acqua.

Resistente ai prodotti di pulizia domestici: durezza superficiale 5 H.

Interno del piatto verniciato con colore simile all'esterno.

Fabbricato in Spagna.

Spessore 30 mm o superiore per una maggiore resistenza alla torsione.

Griglia in acciaio inossidabile lucidato stampato.

Unsere Mineralguss-Duschwannen Stone Quartz sind für maximale Sicherheit und Haltbarkeit ausgelegt. Stil und Qualität in Ihrem Duschraum.

Duschwannen aus Polyesterharz und Quarz.

Hochwertige Acryl-Polyurethan-Außenbeschichtung (UNE 12720).

Rutschfeste C-3 maximale Griffigkeit > 45 Rd. (UNE ENV12633:2003 Zertifikat).

Antibakterielle Behandlung: (JISZ 2801:2006), die die Ansiedlung von Mikroorganismen auf der Oberfläche verhindert.

Klasse 1 in Bezug auf Haltbarkeit und Reinigungsfreundlichkeit, zertifiziert durch das technische Institut AIDIMME.

Hydrolysebeständigkeit: keine Veränderung nach 7 Tagen in Wasser.

Putzmittelbeständig: Oberflächenhärte 5 H.

Die Innenseite der Duschwannen ist mit einer ähnlichen Farbe wie die Außenseite getönt.

Hergestellt in Spanien.

Stärke 30 mm oder mehr für höhere Torsionsfestigkeit.

Inklusive poliertem Edelstahlgitter

Our Stone Quartz range offers different combinations among 8 models, 3 textures, multiple sizes and colours for you to choose from.

La nostra gamma Stone Quartz offre tutte le possibilità per scegliere il suo piatto doccia. Permette di abbinare 8 modelli, 3 superfici e molteplici misure e colori.

Unser Stone Quartz Angebot bietet Ihnen alle Möglichkeiten, Ihre Duschwanne auszuwählen. Es ermöglicht Ihnen die Kombination zwischen 8 Modelle, 3 Texturen und mehrere Größen und Farben.

Maintenance and cleaning

Manutenzione e pulizia Wartung und Reinigung

Stone-Quartz shower trays, can be cleaned with any proper cleaning product, except the ones used for polishing marbles and it is recommended to clean with a cloth or soft sponge always wet, never use aluminium sponge or hard tool.

To disinfect, you can use bleach or any house cleaning product and rinse afterwards with water.

Anti-limescale products can be used for only a few minutes and then rinsed with water.

Our maintenance test results after using cleaning products are below:

I piatti Stone Quartz si possono pulire con qualsiasi prodotto adatto alla pulizia, salvo quelli controindicati essendo derivati del marmo e si raccomanda di pulire con uno straccio o una spugna morbida sempre umida, mai con spazzole.

Per disinfettare si può utilizzare candeggina o ammoniaca diluita e poi risciacquare con acqua.

I prodotti contro il calcare si possono utilizzare ma sempre lasciandoli agire pochi minuti e poi risciacquando con acqua.

I risultati dei nostri Test di resistenza ai prodotti di pulizia sono stati:

Duschwannen können mit jedem Putzmittel gereinigt werden, mit Ausnahme derjenigen, die Marmorderivate beschädigen können. Es wird empfohlen, die Reinigung mit einem weichen, immer feuchten Tuch oder Schwamm durchzuführen, niemals mit einem Scheuerschwamm/Topfreiniger.

Bleichmittel oder verdünntes Ammoniak können zur Desinfektion verwendet werde. Anschließend Duschwanne mit Wasser ausspülen.

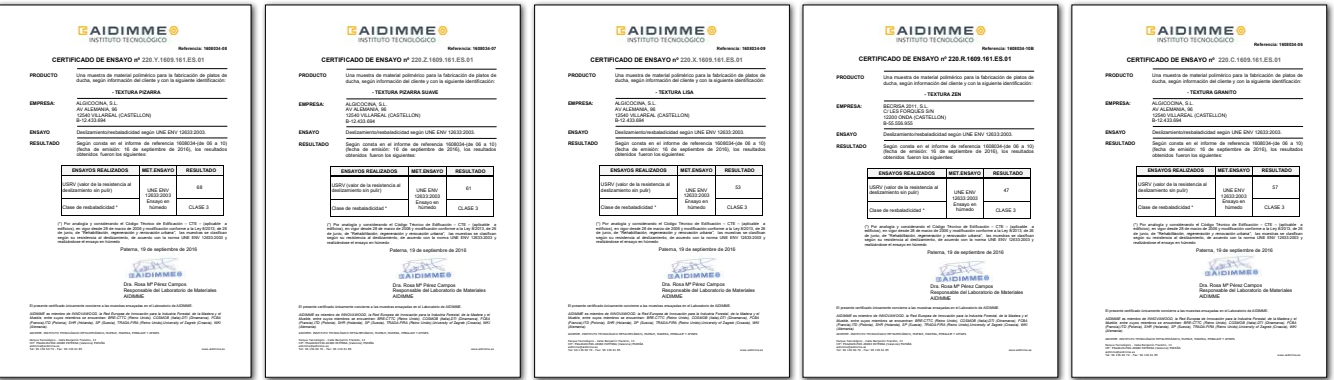

Man kann Anti-Kalk-Produkte verwenden, aber nachdem sie einige Minuten lang eingewirkt sind, sollte die Duschwanne mit Wasser ausgespült werden.

Die Ergebnisse unserer Prüfung auf Beständigkeit gegen Reinigungsproduk-te waren:

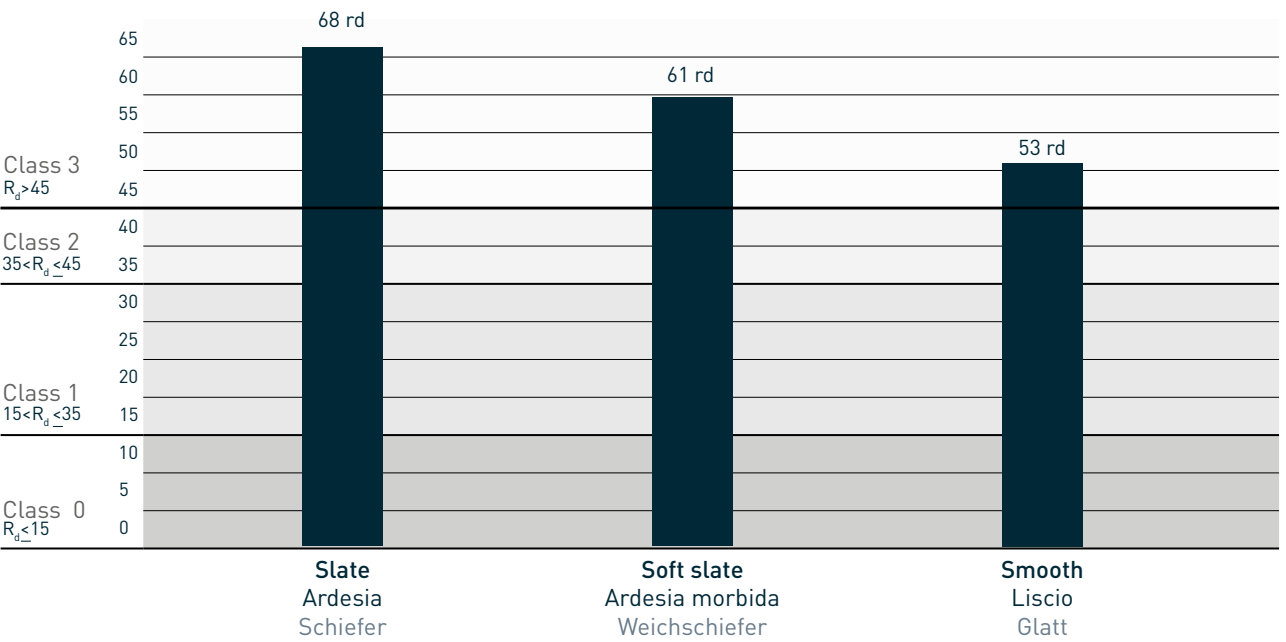

|                                                         |                              |                                                                             |

# Installation

## Shower trays

The assembling instructions are for specialised professionals. Please return the instructions to the user at the end of the installation.

In case of complaints, the costs of removing and replacing the shower tray are not covered by the warranty. This warranty is only valid if the shower tray has been installed according to the following instructions.

### Warranty

Coycama warrants its products against defects in manufacturing and materials for a period of 3 years from the date of sale to its initial customer. The warranty does not include other damages including, but not limited to, inappropriate usage, poor installation, normal wear and tear.

The warranty is void if the shower tray is not installed according to the instruction manual.

The warranty only covers the repair and replacement of a new shower tray and under no circumstances, it covers the installation and removal of a defective tray.

SIZES

FINISH

### Before installing

Check the shower tray if it is adjusted to the desired size and color.

Before the installation, the shower tray can be stored either vertically or horizontally, but never tilted to avoid possible deformations.

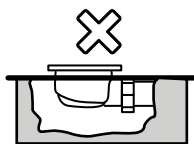

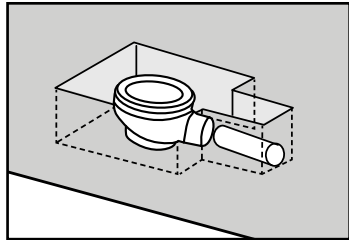

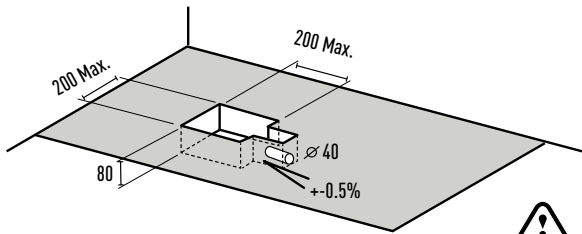

All shower trays can be cut using diamond disc grinders. The cut side will have a different finish, so it should be

placed against the wall.

It is not recommended to lay the tray on legs to avoid deformities, resulting in a voiding the warranty.

It is possible to install the tray on a high-density extruded polystyrene base, follow the gluing and planimetry instructions indicated below.

2

### Choose base height

Position the siphon valve in the place where it will ultimately be installed alongside the shower tray. Calculate the minimum height at which the valve can be installed so that the water flows properly to the drain. This height will determine the level of the shower tray

and the height of the base on which it will rest. Check that the drain has the correct inclination to evacuate the water. We recommend a minimum drain pipe inclination of 1%.

### Preparation of the base

The resin shower tray is not entirely rigid, as it must remain flexible in order to adapt to different temperature changes. For this reason, it must be installed on a smooth and compact base, which will prevent it from deforming.

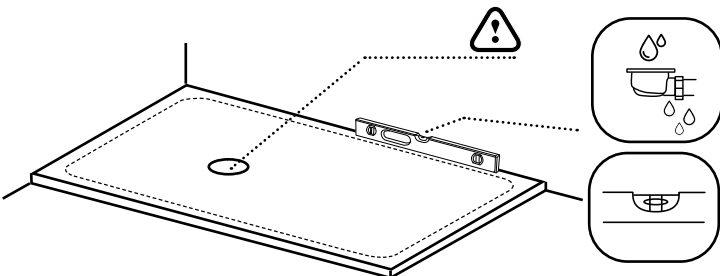

The shower tray is manufactured with the necessary inclination for the water to flow towards the drain. For this reason, it should always be installed either flat or with a slight inclination, between 0% and 5%, in favour of the drain, and never contrary to the drain.

The base must be made of concrete, at least on the upper part, which will be in contact with the bottom of the shower tray. Under no circumstances should the shower tray be placed on a sand bed.

The base should cover almost 100% of the tray except for the approximated 20x20cm valve hole, as well as the outlet for the drainage pipe.

At the time of installation, the concrete base must be perfectly dry, completely smooth and without deformations, as the tray would follow the shape of the base and could be deformed, generating areas with poor drainage and water accumulation.

3

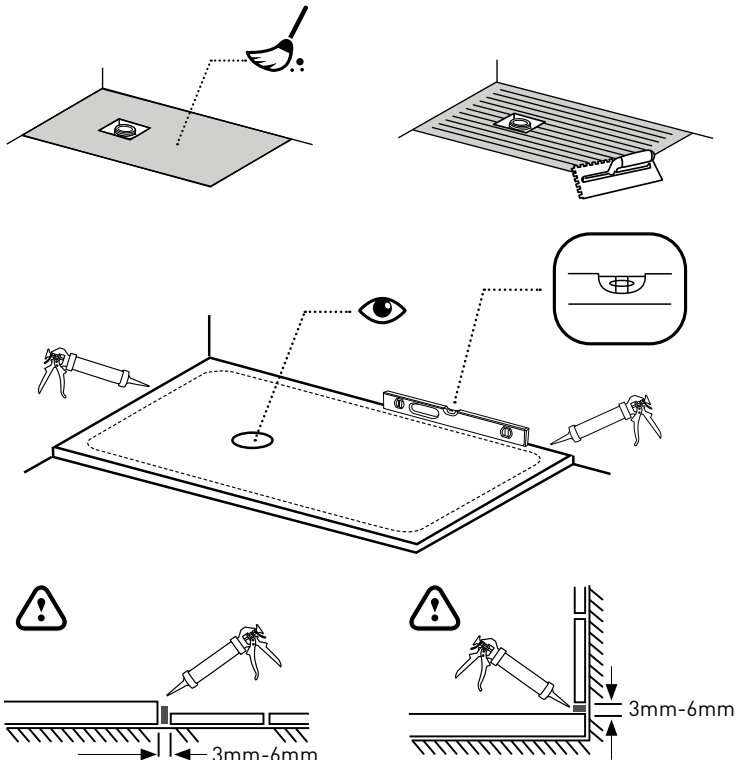

### Placement of the drain

Once the water drainage (valve and pipes) has been installed, the shower tray with the valve must be checked before the final gluing, and a water flow test must be carried out on the entire shower tray, verifying that it drains correctly from all parts of the tray and

that there is no defect in any area of the tray, as well as that the valve drains correctly and the shower tray is perfectly stable on the base.

We recommend the use of our drain valve suitable for resin dishes.

4

### Placement of shower tray

Before gluing, make sure that the surface is clean and dry. Apply polyurethane glue or flex cement glue stripes lengthwise on the substrate.

Place the shower tray and check that it is still level with the base and that the siphon valve fits smoothly and drains properly.

It is advisable to leave a space of 3 mm to 6 mm maximum between the plate and the walls. The ceramic tile should be placed on top of the shower tray, respecting a small space of a few millimetres only. These spaces should be used for the eventual expansion of the shower tray.

The final waterproofing should be done with a small bead of neutral silicone all around the shower tray

whose parts are in contact with the wall or ceramic tiles.

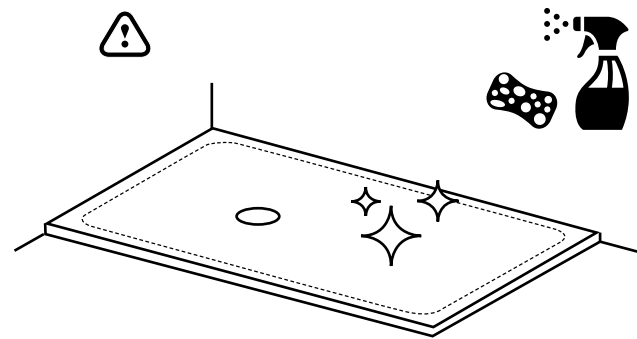

If the works of fit the bathroom tiles is doing after the placement of the shower tray, it is advisable protect the shower tray of the particle material from cement glue or silicone.

If the plating work and installation of bathroom enclosures is to be carried out later, it is recommended to protect the shower tray from the projections of adhesive cement or silicone.

(See table on maintenance and cleaning page 64)

Failure to comply with this procedure will void the warranty of the shower tray.

5

### Maintenance and cleaning

Shower trays can be cleaned with almost all common cleaning agents.

It is recommended to use a sponge and soapy water to clean the shower tray. Never use an abrasive sponge. (See table on maintenance and cleaning)

**IMPORTANT:** if you have to unblock the siphon or the drain pipes, it is very important to be careful not to pour products containing sulphuric acid or caustic soda on the shower tray. It is recommended to use a funnel to pour this kind of product directly into the siphon. These products could irreversibly damage the surface of the shower tray.
